Application for [Position Title]

Dear [Ms./Mr. Last Name],

My name is Salim Ferroukhi, and I am a software engineer with an engineering diploma in Software Engineering from the National Engineering School of Carthage (ENICAR). I am currently pursuing an M.Sc. in AM Software Engineering at Chemnitz University of Technology, and I am writing to apply for the [Position Title] position at [Company Name].

Over four years of professional experience, I have mostly built web applications in Angular and React, with backend work in Java, Node.js and .NET. As a Fullstack Engineer at KIAN Technology, I developed an IoT platform with Angular dashboards for real-time telemetry, live camera streams and device management. At CALX Consulting, I built a reusable React component library from Figma designs alongside Node.js REST services. Before that, I created Microsoft 365 reporting tools on Azure for DataHorizon France and worked remotely for Hippo Labs in the US on a database migration and fullstack features.

Outside of work, I build complete products on my own: Automiq, a real-time telemetry and digital twin platform for vehicle fleets; Nurburger, a product analytics and feature flag service; and Carti, a collaborative Kanban board with live updates over WebSockets. These projects use React, TypeScript, FastAPI and PostgreSQL, and are presented on my portfolio at selimf.com.

[One or two sentences on why this company and role interest you, and what you would bring to the team.] I am available for a [full-time / working student / internship] position from [start date], and I continue to improve my German alongside my studies.

Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to your team.

Kind regards,

Salim Ferroukhi
