PROFILE

I'm a software engineer, exceptionally proficient in frontend development. Professionally, I've mostly built web apps in Angular and React, including dashboards for an IoT platform and a component library built from Figma designs, with backend work in Java and Node.js along the way. After four years of professional experience, I'm now pursuing a Master's in AM Software Engineering at TU Chemnitz in Germany, while continuing to build software and improving my German. Outside of coursework I'm interested in AI, data science and music technology.

EXPERIENCE

KIAN Technology Jun 2024 – Jan 2026
Fullstack Engineer (Angular / Java) Tunis, Tunisia

- Built an IoT platform for real-time monitoring, data visualization and device management across connected networks.
- Developed Angular dashboards and UI components for telemetry tracking, live camera streams and smart construction insights.
- Improved front-end performance and automation workflows through GraphQL integration and rule chain configuration.

  Technologies: TypeScript, Angular, GraphQL, Java (Spring), Azure DevOps, Git

CALX Consulting Nov 2023 – Jun 2024
Frontend Engineer (React / Node.js) Tunis, Tunisia

- Built reusable UI components from Figma designs using React, Tailwind and Storybook.
- Improved platform performance through debugging, Git version control and CI/CD.
- Delivered features in Agile sprints with cross-functional teams.
- Developed backend services with Node.js: REST APIs and authentication.

  Technologies: TypeScript, React, Node.js, Storybook, Tailwind, Azure DevOps, Docker, Git

DataHorizon France Mar 2023 – Oct 2023
Fullstack Developer (.NET / Angular) Tunis, Tunisia

- Built a web application for managing Microsoft 365 service statistics on Azure, including data visualization and reporting.
- Developed a SharePoint alerts system to improve data security, integrating Microsoft APIs and Azure Functions.
- Created dynamic Angular charts to visualize MFA usage and improve the platform's security posture insights.

  Technologies: TypeScript, Angular, C#, .NET, Azure DevOps, Git

Hippo Labs, Inc Aug 2022 – Jan 2023
Fullstack Developer (Node.js / React) Florida, USA (Remote)

- Designed and implemented a database migration process, improving data integrity and system scalability.
- Developed and maintained performant fullstack features, ensuring high responsiveness and code quality.
- Wrote and ran unit, integration and performance tests to keep the whole stack stable.

  Technologies: Node.js, Express.js, JavaScript, React, PostgreSQL, Git

PROJECTS

Automiq
Real-time telemetry and digital twin platform for vehicle fleets.

- A Python simulator streams CAN / OBD-II data (speed, battery, temperatures, tire pressure, fault codes) to a FastAPI server, which stores it in TimescaleDB and pushes it live over WebSockets. The React dashboard shows gauges, a 3D model of each vehicle that highlights faults, a diagnostics log and trip maps.

  Technologies: React, TypeScript, Three.js, Tailwind CSS, FastAPI, TimescaleDB, WebSockets

Nurburger
Product analytics and feature flags, a small PostHog alternative.

- Event capture API with JavaScript and Python SDKs, feature flags with stable percentage rollouts, and a trends builder that compiles to SQL. Custom SQL queries run sandboxed: validated with sqlglot, read-only, under a restricted Postgres role.

  Technologies: React, TypeScript, Tailwind CSS, Recharts, FastAPI, PostgreSQL, Redis

Carti
Collaborative Kanban board for small teams.

- Boards, comments, messages and presence update live over WebSockets. Includes drag and drop with undo, natural-language quick add, an approval flow for reviewers, calendar and list views, and personal analytics.

  Technologies: React, TypeScript, SCSS, Zustand, dnd-kit, FastAPI, PostgreSQL, WebSockets

EDUCATION

Chemnitz University of Technology 2025 – present
M.Sc. AM Software Engineering Chemnitz, Germany

National Engineering School of Carthage (ENICAR) 2020 – 2023
Software Engineering Degree Ariana, Tunisia

SKILLS

Frontend : TypeScript, JavaScript, React, Vue, Angular, Tailwind CSS, Storybook
Backend & data : Java (Spring), Node.js, C# (.NET), GraphQL, REST APIs, PostgreSQL
DevOps : Docker, Azure DevOps, CI/CD, Git, GitHub
Design & teamwork : Figma, Jira, Slack

LANGUAGES

English (Fluent), French (Fluent), German (A2)
